BOOK SYNOPSIS

Advanced LabVIEW Labs provides a structured introduction to LabVIEW-based laboratory skills. The book can be used as a stand-alone tutorial or as a college-level instructional lab text. The reader learns the LabVIEW programming language while writing meaningful programs that explore useful data analysis techniques (numerical integration and differentiation, least-squares curve-fitting, Fast Fourier Transform) and the mechanics of computer-based experimentation using National Instruments DAQ and GPIB boards. During the course of the book, the reader constructs and investigates the proper usage of several computer-based instruments including a digitizing oscilloscope, spectrum analyzer and PID temperature control system as well as learns to control an instrument through the General Purpose Interface Bus.
