BOOK SYNOPSIS

If your interest is in distilling alcohol then this book is for you. It will show you how to build a six gallon electric alcohol still, and use it to turn corn, sugar, or almost anything you can ferment into high proof alcohol. The still heats the wash with a water jacket in which is immersed a 120 volt water heater element. Temperature is controlled with a thermostat. Eventually vapors boil through the rectifying column to the condenser. If you carefully maintain the precise temperature you will get almost pure alcohol.
